# Introduction

**Permanent** color formulas can be used on any percentage of white hair. The more natural color and the less white, the deeper the formulas will appear.

**SuperGlaze** formulas are designed for salt & pepper hair when a more blended color result is desired.

**Toner** formulas made with Deposit-Only colors are to be use on hair that has been lightened to light yellow. Timing can be as short as 5 minutes or as long as 20 minutes depending upon the porosity and texture of the hair. Liquid Shades can replace Deposit-Only Toners.

**High Lift** formulas are designed for both pigmented and salt & pepper hair when 4 levels of lift are desired.

**Super High Lift Blonde** formulas are designed for hair that is light brown or lighter when maximum lift is desired. When use on deeper natural hair levels a warmer color will result. For more tone add an additional 3 to 4 grams of any level 6 or level 4 color.

**Processing time** is always determined by the colorist. The coarser or darker the hair, the longer the time required. Generally set timer for 35 to 45 minutes. Fine hair may take as little as 20 to 30 minutes. Coarse hair may take up to 55 minutes.

**All color formulas were created using Chromastics Hair Color**
